At Pleasantdale -
At job site 11 AM - sent to 2nd floor to await Ed
told to go with Jim to get acquainted with job

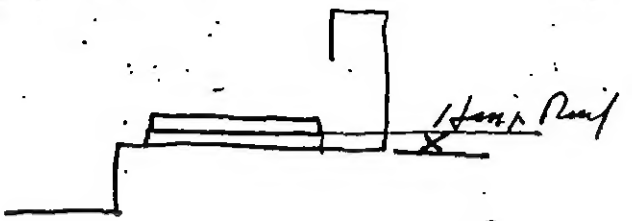
4-1-70

Same as above.
Application of Epoxy to column Asbestos to columns.

4-2-70

to Pleasantdale to have Pictures & Photos & Issuance of ID card to
Job Site 10 AM -
the application of Epoxy & the coating of Asbestos is questionable I believe that everyone is trying to keep their best on any thing they possibly can to come up with a solution to this problem.

4-8-70



X = Metal above Roof
Problem setting Hooks

On East & West Stair Stringers have Bumper Holes - Center Stair has none - Specs call for all - What is "deviation" ? -

4-8-70

Gauge made out of Tubing & welding to chuck Hammell Lugs. #1 & 2 Gauge 3/16 under for Center #3

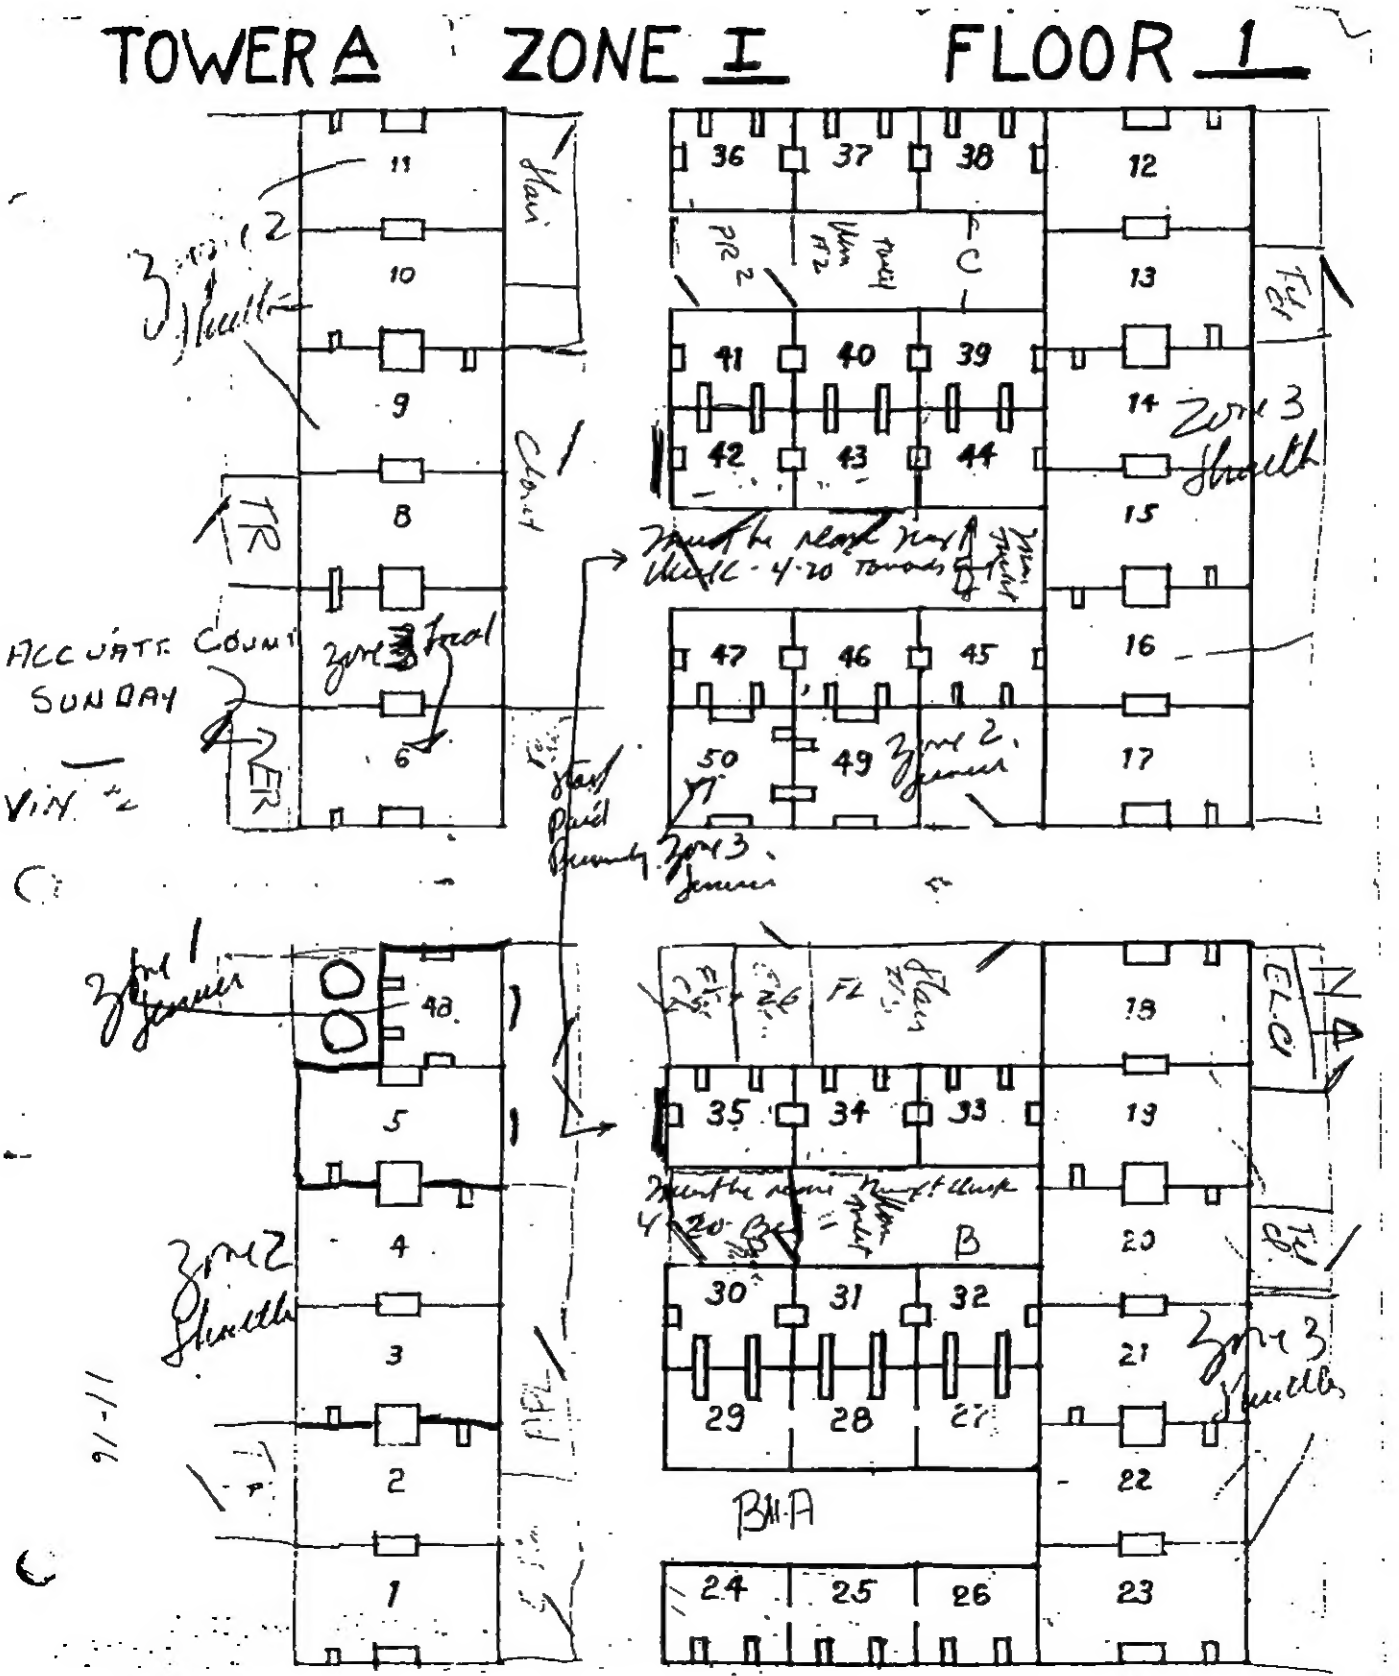
# TOWER A ZONE I FLOOR 1



13.07 WORKMANSHIP

1. The Contractor shall completely shield adjacent finished materials including all aluminum or other ornamental metal, cut stone, and all other finished work from splashing by droppings and misdirected sprayed-on fireproofing material being applied under the Contract. Material which may splash against the ornamental metal, cut stone, and other exposed finished work shall be immediately cleansed from the metal, stone or other material with water by the Contractor.

2. Maintaining such adjacent finished materials free from fireproofing material shall be the responsibility of the Contractor. Adjacent and other materials damaged due to improper protection or negligence on the part of the Contractor shall be replaced by him at his own expense.

3. The Contractor shall coordinate with all other trades as may be directly or indirectly involved in the work and shall schedule his work in such manner as to avoid delay in the progress of the work.

4. The sprayed-on fireproofing and sprayed-on insulation, when completed, shall be free from seams, staging breaks, holes, spalls, cracks, flaking and dusting action, and other defects of any kind.

13.08 CLEANING AND PROTECTION

1. Upon completion of the application of each coat of spray-on material, on each respective floor, or in each respective area, as may be directed by the Engineer, the Contractor shall remove all debris from floors, walls, and other surfaces, and shall collect and deposit such debris in floor containers which shall be provided by the Authority in each area or on each floor where work is being performed. Debris will be removed by others.

2. During the spray-on operations, floors beneath and around machines, water containers, and mixing boxes shall be protected with waterproofed coverings. All metal and other work adjoining the plastering and spray-on operations, including finished concrete floors, shall be protected and shall be cleansed of all spray-on material and any soiling as may occur, immediately upon completion of the finish coats.

3. Upon completion of the work in any areas, or on any floors, the area or floor shall be scraped and left broom clean. All equipment shall be removed when and as directed by the Engineer.
